

Assignment Module 12: Windows Server Basics & Installation

1.What two options are provided in the type of installation window during Windows Server 2016 installation?

Ans:

- Server Core (no GUI)
- Server with Desktop Experience (with GUI)

2.Write the step How to configure server step by step?

Ans:

1. Install Windows Server
2. Set Administrator password
3. Change computer name
4. Configure static IP address
5. Open Server Manager
6. Add roles and features (AD, DNS, etc.)
7. Restart server

3.What are the Pre installation tasks?

Ans:

- Check system requirements
- Take backup of data
- Plan IP address and network
- Select correct version
- Prepare bootable USB/DVD

4. What are the Post installation tasks?

Ans:

- Set static IP
- Rename server
- Install updates
- Configure roles (AD, DNS, DHCP)
- Enable security (firewall, antivirus)

5. What is the standard upgrade path for Windows Server?

Ans:

Upgrade from older to newer version step by step

Example: 2012 → 2016 → 2019 → 2022

6. What is the Physical structure of AD?

Ans:

- Domain Controllers
- Sites
- Subnets
 - It shows physical network structure

7. What is the Logical components of Active Directory?

Ans:

- Forest
- Tree
- Domain
- Organizational Unit (OU)

8. What is the Full form Of LDAP?

Ans : Lightweight Directory Access Protocol

9. What is the location of the AD database?

Ans : C:\Windows\NTDS\NTDS.dit

10. What is child DC?

Ans : Child Domain is a sub-domain under a parent domain

Example: child.parent.com

11. Explain the term forest in AD.

Ans: Forest is the top level in Active Directory It contains multiple domains.

12. What is Active Directory? Check all that apply.

Ans:

- A Windows-only implementation of a directory server
 - Microsoft's implementation of a directory server
 - An LDAP-compatible directory server

13. When you create an Active Directory domain, what's the name of the default user account?

Ans : Administrator

14. AD domain provides which of the following advantages? Check all that apply.

Ans :

- Centralized management
- Single login (SSO)
- Better security
- Resource sharing
- Group policy management

15. What are the minimum hardware requirements for installing Windows Server 2016?

Ans :

- Processor (CPU)
- RAM
- Hard Disk Space
- Network Adapter

16. Explain the different editions of Windows Server 2016 and their features.

Ans :

- Datacenter Edition :
 - Large enterprises
 - Data centers and cloud environments
 - Organizations with heavy virtualization needs
- Standard Edition:
 - Small to medium businesses
 - Organizations with minimal virtualization
- Essentials Edition :
 - Small businesses with basic IT needs
 - Organizations without dedicated IT staff

17. Walk through the steps of installing Windows Server 2016 using GUI mode.

Ans :

- Boot from media
- Start setup
- Select edition with Desktop Experience
- Accept license
- Choose custom installation
- Select partition
- Install Windows
- Set Administrator password
- Configure server settings

18. Explain the process of promoting a Windows Server to a domain controller.

Ans :

- Install Windows Server
- Open Server Manager
- Add the Active Directory Domain Services Role
- Promote the Server to a Domain Controller
- Choose Deployment Operation
- Configure Domain Controller Options
- Configure DNS and NetBIOS Name
- Specify Database and SYSVOL Locations
- Verify Domain Controller Installation

19. Discuss the steps involved in upgrading from a previous version of Windows Server to Windows Server 2016.

Ans :

- Check hardware and software compatibility.
- Verify supported upgrade path.
- Take full backup of server data and system state.
- Install latest updates and drivers on existing server.
- Check installed server roles and applications.
- Insert or mount Windows Server 2016 installation media.
- Run setup.exe.
- Select Upgrade: Keep files, settings, and applications.
- Follow the installation wizard instructions.
- Allow the server to restart and complete installation.
- Log in and verify server roles, services, and applications.
- Install post-upgrade updates and patches.
- Test server functionality and network connectivity.

20. What is Active Directory Domain Services (AD DS), and what are its key components?

Ans : It provides centralized authentication, authorization, and administration in a Windows domain network.

Key components :

- Domain
- Domain Controller
- Forest
- Tree
- Organizational Unit
- Global Catalog
- Schema
- Group Policy
- DNS Integration
- Sites and Replication

21. How do you create a new Active Directory user account in Windows Server ?

Ans :

- Open Server Manager.
- Go to Tools → Active Directory Users and Computers.
- Select the required Organizational Unit or Users folder.
- Right-click the folder and select New → User.
- Enter the user's details.
- Click Next.
- Set and confirm the password.
- Configure password options.
- Click Next.

- Review the details and click Finish.

22. Explain the process of creating and managing Group Policy Objects (GPOs) in Windows Server 2016 or 2019.

Ans :

- Open Server Manager.
- Go to Tools → Group Policy Management.
- Expand the forest and domain structure.
- Right-click the required domain or Organizational Unit.
- Select Create a GPO in this domain, and Link it here.
- Enter a name for the GPO and click OK.
- Right-click the newly created GPO and select Edit.
- Configure settings under:
 - Computer Configuration
 - User Configuration
- Save and close the Group Policy Editor.
- Link the GPO to the required domain, site, or OU if not already linked.
- Use Security Filtering to apply the GPO to specific users or groups.
- Use Group Policy Inheritance and Enforcement settings as needed.
- Run gpupdate /force on client computers to apply policies immediately.
- Verify policy application using gpresult or the Group Policy Results Wizard.

23. What are Organizational Units (OUs) in Active Directory, and how do you use them?

Ans : Organizational Units (OUs) are containers in Active Directory Domain Services used to organize and manage users, computers, groups, and other objects within a domain.

- Organize Active Directory objects logically.

- Separate departments or locations (HR, Sales, IT, etc.).
- Apply Group Policies to specific users or computers.
- Delegate administrative control to specific users or teams.
- Simplify management of network resources.
- Control security and administration more efficiently.

24. Describe the process of delegating administrative privileges in Active Directory.

Ans :

- Open Active Directory Users and Computers.
- Select the required Organizational Unit (OU).
- Right-click the OU and choose Delegate Control.
- The Delegation of Control Wizard opens.
- Click Next.
- Add the user or group to whom administrative rights will be delegated.
- Click Next.
- Choose the tasks to delegate, such as:
 - Reset user passwords
 - Create/delete user accounts
 - Manage groups
 - Modify user information
- Select Create a custom task to delegate if specific permissions are needed.
- Click Next and review the settings.
- Click Finish to apply the delegated permissions.
 - Verify that the delegated user/group can perform the assigned tasks.
